

Omnivex's Moxie Content Management Software

Omnivex's DS Software

Omnivex's content management software, Moxie, can be used in different industries, including multi-PC synchronization for videowalls, location-based content triggered by GPS coordinates and user-defined preferences, and dynamic wayfinding. Moxie software delivers rich, contextual media to all types of audiences to increase effectiveness of signage and lower associated operating costs. Moxie users can create multiple graphic layers on non-rec-

tangular surfaces, group them, rotate them and orient them as desired. The newest version of Moxie, 6.04, works with Microsoft Windows 7 to offer customers enhanced security, user-interface features and reliability improvements. Moxie takes advantage of Windows 7 video processing capabilities. It allows users to move into 64-bit deployment when the time is right.
