QVS HDMI PORTABLE VIDEO PATTERN GENERATOR

QVS has introduced the HDMI Portable Video Pattern Generator for testing HDTV displays and projectors for color and resolutions. It has 34 test patterns, 48 timings from 640x350 to 1920x1200 to HDTVs 1080p, built-in audio, and HDCP signal tester. It features an easy-to-use OSD, up to eight hours rechargeable battery, and a universal power adaptor.

◀ OMNIVEX MOXIE SOFTWARE FOR VIDEO WALL MANAGEMENT

Omnivex Corporation has advanced the functionality of its Moxie software with its latest release. Omnivex Moxie 6.05 has the functionality to manage videowalls driven by any number of PCs to form single or multiple images through the Videowall Synchronization feature. A video can span multiple PCs, be displayed on multiple screens, and remain in frame synchronization, even in the event of one or more Player PCs restarting. The end result is one perfectly unified, visually stunning videowall that is capable of managing the most elaborate content imaginable. Users of Moxie 6.05 can set up multiple tasks to synchronize remote files, playlists, schedules, etc. to the Data Server folder. Users can then simply drop content files in to a synchronized folder on their network and Moxie will retrieve them. With Moxie's Data Proxy capability, multiple Players can connect through a single node, dramatically reducing network traffic and improving efficiencies.
