

The Power of Omnivex in

Government

Enhance visitor experience in government facilities with digital communications

How can Omnivex Help Your Organization?

Governments can streamline operations and reduce operating costs with digital communications.

Alert

Share wait-times and emergency information on digital signage

Navigate

Make navigation easy with interactive wayfinding and digital signs

Communicate

Share real time about events, announcements, news, & weather

Integrate

Connect digital signage to backend systems and alarms

Whether you are a small town or a large city the uses for visual communications are numerous and the advantages are significant. By replacing static signs with a network of screens and interactive kiosks, governments can streamline operations and reduce operating costs both now and in the future. A digital communications network is a cost effective infrastructure that can support multiple departments and many applications. The applications of digital communications in government extend far beyond a network of digital signs and include other areas such as self-service kiosks, interactive wayfinding stations, emergency notifications, and visitor communications.

"The speed with which people navigate the Justice Center is evidence that we accomplished our objective."

David Goodwin, Director of Wake County's General Services Administration

Wake County is the second-most populous County in North Carolina and one the fastest growing in the nation. To keep pace with growth, Wake County government planned a new criminal court house and records building. The building, named the Justice Center, was designed with safety and customer service elements. To ease wayfinding Wake County planned a system of digital signage that would move the public through the building quickly and efficiently. The Omnivex signage has received a number of positive comments and accolades from the public and Wake County recently won an achievement award from the National Association of Counties for the installation. Wake County has set a new standard for public buildings and plans to further extend digital signage into other areas and venues in the county

Case Study: Wake County
